Constituent of Symbiosis International (Deemed University), Pune

(Established under Section 3 of the UGC Act of 1956 vide notification number F-9-12/2001-U-3 of the Government of India)
Re-Accredited by NAAC with 'A++' Grade

Name of Student: Aryan Singh Kasera

PRN: 25070122052

Subject: Programming with Java

Sem: III AY: 2026-27

ASSIGNMENT No: 5

TITLE: Develop a Java application demonstrating the use of ArrayList, Vector, and StringBuffer for dynamic data storage, management, and string manipulation.

Problem Statement

Develop a Java application demonstrating the use of ArrayList, Vector, and StringBuffer for dynamic data storage, management, and string manipulation.

Learning Objectives

To implement dynamic data storage and string manipulation using ArrayList, Vector, and StringBuffer.

Theory

ArrayList and Vector are dynamic array implementations provided by the Java Collections

Framework. ArrayList offers faster performance in single-threaded applications, whereas Vector provides synchronized operations for thread safety. StringBuffer is a mutable sequence of characters that allows efficient string modification without creating new objects.

These classes are commonly used in applications requiring dynamic memory allocation and efficient string processing.

Conclusion:

This experiment demonstrated the practical implementation of ArrayList, Vector, and StringBuffer in Java. ArrayList and Vector were used for dynamic data storage and management, while StringBuffer was used for efficient string manipulation. The developed applications successfully performed add, remove, and display operations, improving the understanding of Java Collections Framework and mutable string handling in real-world programming.

1. Create a To-Do List application using ArrayList to store tasks and StringBuffer to display tasks.

```
TodoList.java    Share  Run
```

```
1- import java.util.ArrayList;
2- class TodoList {
3-     public static void main(String[] args) {
4-         ArrayList<String> tasks = new ArrayList<>();
5-
6-         tasks.add("Complete Java Assignment");
7-         tasks.add("Study for Exam");
8-         tasks.add("Submit Project");
9-
10-        StringBuffer sb = new StringBuffer();
11-
12-        sb.append("To-Do List\n");
13-
14-        for (int i = 0; i < tasks.size(); i++) {
15-            sb.append((i + 1) + ". " + tasks.get(i) + "\n");
16-        }
17-
18-        System.out.println(sb);
19-    }
20- }
21
```

OUTPUT

```
Output

To-Do List
1. Complete Java Assignment
2. Study for Exam
3. Submit Project

=== Code Execution Successful ===
```

2. Create a Student Course Registration System using ArrayList to store the list of courses registered by a student and StringBuffer to generate and display the registered course list. The application should allow users to add, remove, and view registered courses.

```
CourseRegistration.java
1 import java.util.ArrayList;
2 import java.util.Scanner;
3
4 class CourseRegistration {
5     public static void main(String[] args) {
6         ArrayList<String> courses = new ArrayList<>();
7         Scanner sc = new Scanner(System.in);
8
9         int choice;
10
11         do {
12             System.out.println("\n1. Add Course");
13             System.out.println("2. Remove Course");
14             System.out.println("3. View Courses");
15             System.out.println("4. Exit");
16             System.out.print("Enter Choice: ");
17             choice = sc.nextInt();
18             sc.nextLine();
19
20             switch (choice) {
21                 case 1:
22                     System.out.print("Enter Course Name: ");
23                     courses.add(sc.nextLine());
24                     System.out.println("Course Added.");
25                     break;
26
27                 case 2:
28                     System.out.print("Enter Course Name to Remove: ");
29                     String course = sc.nextLine();
30                     if (courses.remove(course))
31                         System.out.println("Course Removed.");
32                     else
33                         System.out.println("Course Not Found.");
34                     break;
35
36             }
37         } while (choice != 4);
38     }
39 }
```

```

35
36         case 3:
37             StringBuffer sb = new StringBuffer();
38             sb.append("Registered Courses\n");
39             for (int i = 0; i < courses.size(); i++) {
40                 sb.append((i + 1) + ". " + courses.get(i) + "\n");
41             }
42             System.out.println(sb);
43             break;
44
45         case 4:
46             System.out.println("Exiting...");
47             break;
48
49         default:
50             System.out.println("Invalid Choice.");
51     }
52     } while (choice != 4);
53
54     sc.close();
55 }
56 }

```

Output

```

1. Add Course
2. Remove Course
3. View Courses
4. Exit
Enter Choice: 1
Enter Course Name: Java
Course Added.

```

```

1. Add Course
2. Remove Course
3. View Courses
4. Exit
Enter Choice: 4
Exiting...

```

```

=== Code Execution Successful ===
