

SYMBIOSIS INSTITUTE OF TECHNOLOGY (SIT)

Constituent of Symbiosis International (Deemed University), Pune

(Established under Section 3 of the UGC Act of 1956 vide notification number F-9-12/2001-U-3 of the Government of India)

Re-Accredited by NAAC with 'A++' Grade

Name of Student: Aryan Singh Kasera

PRN: 25070122052

Subject: Programming with Java

Sem: III AY: 2026-27

Assignment No: 11

TITLE: Write a Java program to demonstrate the implementation of interfaces.

Problem Statement

Write a Java program to demonstrate the implementation of interfaces.

Learning Objectives

To implement interfaces for achieving abstraction and multiple inheritance of type.

Theory

An interface specifies a set of abstract methods that implementing classes must define. It provides complete abstraction and supports multiple inheritance of type. Interfaces improve modularity, loose coupling, and software flexibility. They allow different classes to implement common behavior while maintaining independent implementations. Interfaces are widely used in enterprise application development.

1. Create an interface Printable and implement it in Student and Employee classes.

Main.java

Share

Run

```
1 interface Printable {
2     void print();
3 }
4
5 class Student implements Printable {
6     String name;
7     int rollNo;
8
9     Student(String name, int rollNo) {
10         this.name = name;
11         this.rollNo = rollNo;
12     }
13
14     public void print() {
15         System.out.println("Student Name: " + name);
16         System.out.println("Roll No: " + rollNo);
17     }
18 }
19
20 class Employee implements Printable {
21     String name;
22     int id;
23
24     Employee(String name, int id) {
25         this.name = name;
26         this.id = id;
27     }
28
29     public void print() {
30         System.out.println("Employee Name: " + name);
31         System.out.println("Employee ID: " + id);
```

```
32     }
33 }
34
35 class Main {
36     public static void main(String[] args) {
37         Printable p1 = new Student("Aryan Singh Kasera", 122052);
38         Printable p2 = new Employee("Uday", 401);
39
40         p1.print();
41         p2.print();
42     }
43 }
```

OUTPUT

Output

Student Name: Aryan Singh Kasera
Roll No: 122052
Employee Name: Uday
Employee ID: 401

=== Code Execution Successful ===

2. Create an interface Switchable with a method turnOn(). Implement the interface in Light and Fan classes to display the device status.

Main.java    Share 

```
1 interface Switchable {  
2     void turnOn();  
3 }  
4  
5 class Light implements Switchable {  
6     public void turnOn() {  
7         System.out.println("Light is ON");  
8     }  
9 }  
10  
11 class Fan implements Switchable {  
12     public void turnOn() {  
13         System.out.println("Fan is ON");  
14     }  
15 }  
16  
17 class Main {  
18     public static void main(String[] args) {  
19         Switchable s1 = new Light();  
20         Switchable s2 = new Fan();  
21  
22         s1.turnOn();  
23         s2.turnOn();  
24     }  
25 }
```

OUTPUT

Output

```
Light is ON  
Fan is ON|  
  
=== Code Execution Successful ===
```
